Input Problem

Question:

Find TX if EX = 24 and DE = 7.

A. 7 **B. 24**

C. 25 **D. 32**

Claim MV:
C 11/16 ×
D 5/16

Exec cluster:
D 11/16

K=16 candidates

Candidate i: claim / exec mismatch

Symbolic Pathway

```
DE = 7
EX = 24
DE ⊥ EX
DT = DE
```
VGF

```
DX = √(7² + 24²)
TX = DX + DE
answer = TX
```
DSL

```
answer = 32
```
Exec

Neural Pathway

```
answer = 25
(confuses TX with DX)
```
Claim

Candidate j: self-consistent derivation

Symbolic Pathway

```
DE = 7
EX = 24
r = DE
```
VGF

```
DX = √(7² + 24²) = 25
XT = DX + r
answer = XT
```
DSL

```
answer = 32
```
Exec

Neural Pathway

```
answer = 32
(TX = DX + DT)
```
Claim

κ

κ = 0
downweight

CCV

κ = 1
keep

κ

Claim = Exec

D. 32
